## Rain Water Harvesting

Under rain water harvesting system, rain water flowing from the terrace is diverted towards the campus area and garden area, where the water is absorbed by the soil. This enhances the water table in the campus and its surrounding region.

**Disposal Pipes Diverting Roof Water down to Garden Area**

**Pipes Originating from Roof Top Discharge Water Down to Ground Area and Garden**

## Maintenance of Water Bodies and Distribution System in the Campus

There are two (2) water tanks on the ground floor each having storage capacity of 5000 litres and one (1) water storage tank on the top floor, having storage capacity of 2000 litres, which are used for the storage of water supplied by the Corporation. From these tanks, water is supplied throughout the entire building.

Both these water tanks and water storage tanks at the top are cleaned at a regular interval. Each tank takes three days to clean with water and potassium permanganate. The dirty water is thrown out and this process is repeated 2-3 times. Water tanks are unlocked only for the process of cleaning, otherwise the water tanks remain locked.

**Ground Level Water Tank- 5000 litres each**

**Overhead Water Tank- 2000 litres**
